

Modern Authentication & Identity for Businesses

Elevate your team's productivity with secure, optimized workflows that enhance user experience while safeguarding your essential business data and systems.

Organizations across various industries face the dual challenges of adhering to stringent compliance standards and protecting sensitive information. Concurrently, they must ensure convenient access to data and systems for employees, promoting seamless task completion and operational efficiency.

While legacy identity and SSO systems have supported workflow productivity, they often fall short in security and advanced identity functionalities. AuthX effectively addresses these shortcomings by delivering a seamless user experience coupled with robust security tools that meet compliance guidelines and safeguard your business.

With AuthX, achieve the optimal balance between user convenience and security, ensuring your organization remains agile, compliant, and secure in today's dynamic digital landscape.

The AuthX Difference:

Enable Remote Users Effortlessly with Our Cloud Platform

Historically, your authentication solution was limited to the confines of your on-campus network. With AuthX you can enable your modern remote workforce with more secure, modern identity workflows.

Integrate with your Identity Stack

Built on open standards and integration best practices, AuthX can enhance authentication with your existing identity tools today or provide a end-to-end comprehensive identity solution for organizations without existing tools.

Expanded Authentication Workflows

AuthX delivers modern passwordless authentication, both with desktop and mobile workflows that enhance productivity, like shared kiosk, delegation mode, remote unlock and more.

Go Beyond Badge Tap

Match your existing workflows with badge tap while extending authentication processes to include AuthX advanced modern identity validation with mobile biometrics, remote unlock and more.

Lower Your Identity Costs

AuthX has affordable monthly user licensing, and supports lower cost readers. Many customers are able to replace overlapping identity solutions like MFA, EPCS, SSO/AM and more.

Partners in Success

We work alongside your team to ensure successful migration and user acceptance. Our constant innovation is driven by customer feedback.
